

ROBIN HWANG

22 Bethal Lane, Commack, New York 11725

Email: rlhwang@umich.edu • Website: www.robinhwang.net • LinkedIn: www.linkedin.com/in/hwangr/

EDUCATION

University of Michigan

B.S. Computer Science

Notable Coursework: Data Structures and Algorithms, Elementary Programming Concepts, Programming and Data Structures, Discrete Mathematics, Introduction to Computer Organization

Aug. 2022 – May 2026

Ann Arbor, MI

RELEVANT EXPERIENCE

Software Engineering Intern

Stanford Linear Accelerator Center (SLAC National Accelerator Laboratory)

- Employed simulation software to refine control strategies for accelerator parameters, significantly reducing experimental redundancies and enhancing system space efficiency by a three-fold factor
- Replaced older simulation software for FACET-II, specifically using Impact-T in place of the General Particle Tracer (GPT) and using Bmad in place of Lucretia
- Ran start-to-end simulations of beam properties and prepared conference proceedings in a professional report (DOI: [10.13140/RG.2.2.15457.72807](https://doi.org/10.13140/RG.2.2.15457.72807))

Jun. 2024 – Present

Menlo Park, CA

Machine Learning Engineering Intern

Stanford Linear Accelerator Center (SLAC National Accelerator Laboratory)

- Optimized water-cooling systems using Python, PyTorch, and data from FAST particle accelerator injector at Fermilab by implementing a long short-term memory (LSTM) neural network
- Improved speed of normalization of temperature by up to five times using model predictive control rather than traditional proportional-integral-derivative (PID) controller or other feed-forward neural network solutions
- Prepared findings and gave a lecture at the laboratory on the benefits of utilizing machine learning in optimizing particle accelerators (DOI: [10.13140/RG.2.2.15339.52008](https://doi.org/10.13140/RG.2.2.15339.52008))

Jun. 2023 – Aug. 2023

Menlo Park, CA

PROJECTS

Cache Simulator

- Designed and implemented a cache simulator to evaluate various cache architectures, including direct-mapped, fully associative, and set-associative caches
- Developed simulation algorithms to model cache behavior, including hit/miss detection, replacement policies, and cache coherency protocols

Sep. 2023 – Oct. 2023

Piazza Post Organizer

- Created a machine learning algorithm using C++ and the STL to categorize posts on the web application Piazza depending on certain patterns in their content
- Implemented a binary search tree (BST) to recursively (for the sake of efficiency) analyze posts

Mar. 2023 – Apr. 2023

Room Reservation System

- Developed a room reservation system with a GUI in Java and Swing for faculty to reserve computer labs and multipurpose classrooms and implemented a binary search engine function for administrators to search through faculty database
- Installed application on the district's LAN (local area network) for faculty use

Jun. 2021 – Jan. 2022

LEADERSHIP EXPERIENCE

Conference Chairperson

Society of Asian Scientists and Engineers (SASE)

- Led and organized the 2024 SASE Midwest Regional Conference, which is a diversity, equity, and inclusion (DEI) conference for the Asian community
- Coordinated efforts leading to 262 registered attendees, marking a 153% increase from the previous record set in 2018
- Oversaw 11 workshops run by sponsors and SASE team members, contributing to professional and personal development of attendees

Sep. 2023 – Apr. 2024

Ann Arbor, MI

SKILLS

Programming Languages

Python, C++, Java, HTML, CSS, JavaScript, R

Software Tools

PyTorch, matplotlib, numPy, Git, pandas, Flask, Figma, Netlify, Firebase, AGILE methodology, APIs, React

Office Tools

Microsoft Word, Microsoft Excel, Microsoft PowerPoint, Microsoft Publisher, Google Suite, Dropbox

Spoken Languages

English, Korean
